

# HAIKOU JIANGDONG NEW DISTRICT

HAIKOU, CHINA

## AIM OF PROJECT

Chapman Taylor, in collaboration with Shanghai Tianhua Architectural Design Company, has created a concept design for a 30,000-hectare area which envisages a sustainable residential, industrial, financial and tourist district to the east of Haikou in the north of Hainan Island.

The development will create a new urban area of 19,200 hectares which will be home to a new international trading hub for energy, shipping, commodities and financial instruments, hosting headquarters buildings for several major companies and research institutions.

The design also protects a 10,600-hectare national nature reserve, placing emphasis on ecological responsibility while enhancing the local rivers, lakes and wetlands. It is anticipated that the new district will be built by 2025.

## A NEW AND ECOLOGICALLY RESPONSIBLE URBAN DISTRICT
